■ **GENERAL INFORMATION**

Item	Contents	Unit
LCD type	TFT/Transmissive/Normally white	/
Size	7.0	Inch
Viewing direction	12:00	O' Clock
Gray scale inversion direction	6:00	O' Clock
LCM (W × H × D)	165.00×104.00×6.50	mm^3
Active area (W×H)	153.60×86.64	mm^2
Pixel pitch (W×H)	0.192×0.1805	mm^2
Number of dots	800 (RGB) × 480	/

Driver IC	Himax => Source IC HX8264-D06DPD300
	          Gate IC HX8664-B00BPD300
	Ilitek => Source IC ILI6126S
	          Gate IC ILI5960D
		/

Backlight type	27 LEDs	/
Interface type	Digital RGB(6bits/color) data transfer	/
Color depth	262K	/
Pixel arrangement	R.G.B vertical stripe	/
Surface treatment	Anti-glare(AG),3H	/
Input voltage	3.0	V
With/Without TSP	With TSP	/
Weight	165	g

Note 1:Viewing direction for best image quality is different from TFT definition, there is a 180 degree shift.
Note 2 : RoHS compliant;
Note 3: LCM weight tolerance: ± 5% .

DETAIL "A"
SCALE 4:1

■ ABSOLUTE MAXIMUM RATINGS

Parameter of absolute maximum ratings	Symbol	Min	Max	Unit	Note
Power supply voltage	VCC	-0.3	6.0	V	
Power supply LED voltage	VLED	-0.3	6.0	V	
Signal input voltage	VIN	-0.3	Vcc+0.3	V	Note 1
Permissive input ripple voltage	V_{RF}	-	100	mVp-p	
Operating temperature	Top	-10	60	°C	Note 2,3,4
Storage temperature	TST	-20	70	°C	Note 2

Note 1: VIN: R0-R5,G0-G5,B0-B5,DCLK,DE.

Note 2: 95 % RH Max. (40 ° C ≥ Ta). Maximum wet-bulb temperature at 39 ° C or less. (Ta > 40 ° C) No condensation.

Note 3: In case of below 0° , the response time of liquid crystal (LC) becomes slower and the color of panel becomes darker than normal one. Level of retardation depends on temperature, because of LC's character

Note 4: Only operation is guarantied at operating temperature. Contrast, response time, another display quality are evaluated at +25° C.

Display On/Off Sequence :
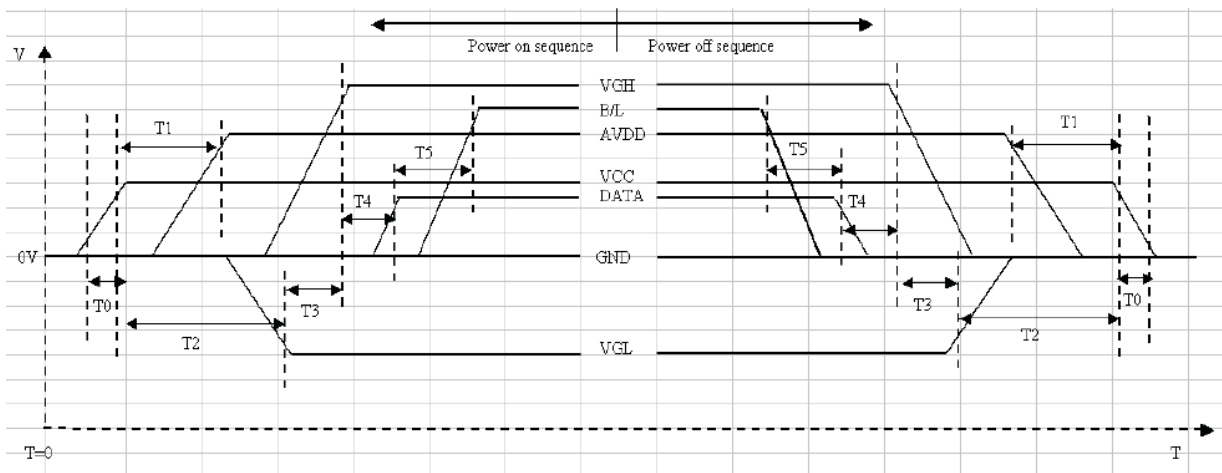

Item	Min.	Typ.	Max.	Unit
T0	0.5	--	20	msec
T1	16			msec
T2	20			msec
T3	10			msec
T4	10		50	msec
T5	50			msec
Power On Sequence: VCC-> AVDD -> VGL -> VGH -> Data -> B/L

Power Off Sequence: B/L-> Data -> VGH -> VGL -> AVDD -> VCC

■ ELECTRICAL CHARACTERISTICS

DC CHARACTERISTICS (Ta=25±2°C, V$_{SS}$=GND=0)

Item		Symbol	Min.	Typ.	Max.	Unit	Remark
Power supply Logic Voltage		VCC	2.7	3.0	3.5	V	
Power supply LED Voltage		VLED	4.5	5	5.5	V	
Input Voltage for logic	H Level	VIH	0.7xVCC	-	VCC	V	
	L Level	VIL	0	-	0.3xVCC	V	
Power Supply current		ICC	-	170	-	mA	Note 1
Power Supply current		ILED	-	450	550	mA	
LED Life time		-	30000	-	-	Hr	Note 2

Note1: fv =60Hz , Ta=25°C , Display pattern : Black pattern
Note2: The environmental conducted under ambient air flow ,at Ta=25±2°C,60%RH±5%

■ ELECTRO-OPTICAL CHARACTERISTICS

Item of electro-optical characteristics	Symbol	Condition	Min	Typ	Max	Unit	Remark	Note
Response time	Tr+ Tf		-	25	35	ms	Fig.1	4
Contrastratio	Cr	θ=0° ∅=0° Ta=25℃	400	500	-	---	FIG2.	1
Luminance uniformity	δ WHITE		70	80	-	%	FIG2.	3
Surface Luminance	Lv		380	440	-	cd/m^2	FIG 2.	2
Color temperature	K	---	6500	7000	7500	---	---	-
Viewing angle range	θ	∅ = 90°	40	50	-	deg	FIG3.	6
		∅ = 270°	50	60	-	deg	FIG3.	
		∅ = 0°	60	70	-	deg	FIG3.	
		∅ = 180°	60	70	-	deg	FIG3.	
NTSC ratio	---	---	-	45	-	%	-	-
CIE (x, y) chromaticity	Red x	θ=0° ∅=0° Ta=25℃	-	-	-		FIG 2.	5
	Red y		-	-	-			
	Green x		-	-	-			
	Green y		-	-	-			
	Blue x		-	-	-			
	Blue y		-	-	-			
	White x		0.280	0.310	0.340			
	White y		0.330	0.360	0.390			

Note1.　Contrast Ratio(CR) is defined mathematically by the following formula.　For more information see FIG 2.:

$$\text{Contrast Ratio} = \frac{\text{Average Surface Luminance with all white pixels (P 1,P2, P 3,P4, P5)}}{\text{Average Surface Luminance with all black pixels (P1, P2, P 3,P4, P5)}}$$

Note2.　Surface luminance is the LCD surface　from the surface with all pixels displaying white. For more information see FIG 2.

Lv = Average Surface Luminance with all white pixels　(P1, P2, P 3,P4, P5)

Note3.　The uniformity in surface luminance（δ WHITE）is determined by measuring luminance at each test position 1 through 5, and then dividing the maximum luminance of 5 points luminance by minimum luminance　of 5 points luminance.　For more information see FIG 2.

$$\delta \text{ WHITE} = \frac{\text{Minimum Surface Luminance with all white pixels (P}_1\text{, P}_2\text{, P }_3\text{,P}_4\text{, P}_5\text{)}}{\text{Maximum Surface Luminance with all white pixels (P}_1\text{, P}_2\text{, P }_3\text{,P}_4\text{, P}_5\text{)}}$$

Note4.　Response time is the time required for the display to transition from White to black(Rise Time, Tr)　and from black to white(Decay Time, Tf). For additional information see FIG 1..

Note5.　CIE (x, y) chromaticity ,The x,y value is determined by screen active area position 5.　For more information see FIG 2.

Note6.　Viewing angle is the angle at which the contrast ratio is greater than 2. For TFT module the conrast ratio is greater than 10. The angles are　determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface.　For more information see FIG 3.

Note7.　For Viewing angle and response time testing, the testing data is base on Autronic-Melchers's ConoScope. Series Instruments. For contrast ratio, Surface Luminance, Luminance uniformity and CIE，　the testing data is base on TOPCON's BM-5 photo detector.

Note8.　For TFT transmissive module, Gray scale reverse occurs in the direction of panel viewing angle.
FIG.1.   The definition of Response Time

FIG.2.   Measuring method for Contrast ratio,surface luminance, Luminance uniformity,CIE (x, y) chromaticity

A : 5 mm
B : 5 mm
H,V : Active Area
Light spot size ∅=5mm, 500mm distance from the LCD surface to detector lens
measurement instrument is TOPCON's luminance meter BM-5

**FIG.3.   The definition of viewing angle**

37	GND	P	Ground	
38	DCLK	I	Data Clock	
39	GND	P	Ground	
40	GND	P	Ground	

I: Input, O: Output, P: Power

Notes:

1) GND Pin must ground contact, can not be floating.

2) Connector Part No: FH12-40S-0.5SH or equivalent.

2.2 Back-light Dimming
Note 2: ADJ signal=0~3.3V, Operating frequency:1KHz

2.3 Touch Panel Unit

Pin No.	Symbol	Function	Remark
1	Y2	Touch Panel Up	
2	X2	Touch Panel Right	
3	Y1	Touch Panel Down	
4	X1	Touch Panel Left	

Notes: Connector Part No: CVILUX CF25041D0R0-10 or equivalent.

3.   Touch Screen Panel Specifications

3.1   Touch Panel

3.1.1   Electrical Characteristics

Item	Min.	Typ.	Max.	Unit	Note
Linearity	-1.5	-	1.5	%	Analog X and Y directions
Terminal resistance	200	-	400	Ω	Y(Glass side)
	200	-	900	Ω	X(Film side)
Insulation resistance	20	-	-	MΩ	DC 25V
Voltage	3.0	5.0	7.0	V	DC
Response time	-	15	-	ms	
Transparency	-	80	-	%	Non-glare

Caution (1) : Do not operate it with a thing except a polyacetal pen (tip R0.8mm or less) or a finger, especially those with hard or sharp tips such as a ball point pen or a mechanical pencil.

3.1.2   Mechanical & Reliability Characteristics

Item	Min.	Typ.	Max.	Unit	Note
Activation force	60	80	100	g	(1)
Hitting Durability	1,000,000	-	-	times	(2)
Sliding Durability	100,000			times	
Surface hardness	3	-	-	H	JIS K5400

Note (1) Input : Finger or polyacetal pen 0.8R

Note (2) Pit 1,000,000 times on the Film with a R8.0 (Hardness 60°) silicon rubber.
- Force : Force : 200g
- Frequency : 2 times/sec

3.2   Housing Design Guide

Housing design follow as below.

1) Avoid the design that housing overlap and press on the active area of the LCM.

2) Give enough gap(over 0.5mm at compressed) between the housing and TSP to protect wrong operating.
3) Use a buffer material(Gasket) between the TSP and housing to protect damage and wrong operating.

4) Avoid the design that buffer material overlap and press on the inside of TSP view area.
■ **REFERENCE APPLICATION NOTES**

　4. Timing Condition (DE only mode)

Signal	Parameter	Symbol	Min.	Typ.	Max.	Unit.	Remark
DCLK	DCLK cycle time	T_{cph}	25	-	-	ns

	Blue(0)	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1

0 : Low level voltage, 1 :High level voltage

Each basic color can be displayed in 64 gray scales from 6 bit data signals. With the combination of total 18 bit data signals, the 262,144-color display can be achieved on the screen.
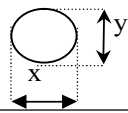

■ **RELIABILITY TEST CONDITIONS**

No.	Test Item	Test Condition	Inspection after test
1	High Temperature Storage	70±2℃/240 hours	2
2	Low Temperature Storage	-20±2℃/240 hours	1,2
3	High Temperature Operating	60±2℃/240 hours	
4	Low Temperature Operating	-10±2℃/240 hours	1
5	Damp proof Test operating	50℃±5℃×90%RH/240 hours	1,2
6	Vibration test	Vibration Frequency:10~55Hz. Total fixed amplitude:1.5mm. One cycle 60 seconds to 3 direction of X, Y, Z each 15 minutes.	3
7	Dropping test	To be measured after dropping from 60cm high on the concrete surface in packing state.	
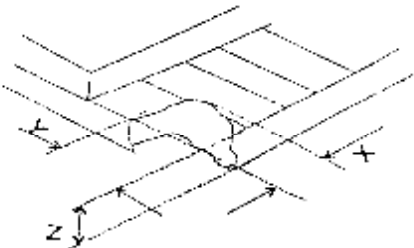

Notes:　1. No dew condensation to be observed.

　　　　2. The function test shall be conducted after 4 hours storage at the normal temperature and humidity after removed from the test chamber.

　　　　3. Vibration test will be conducted to the product itself without putting I in a container.
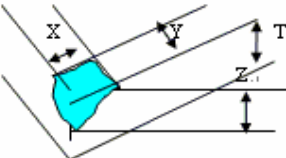

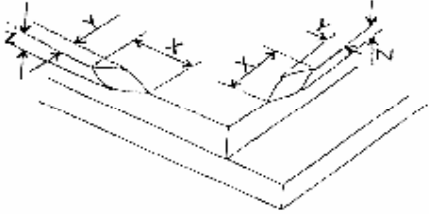

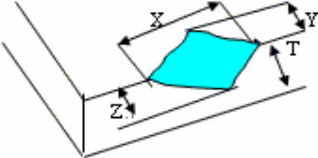

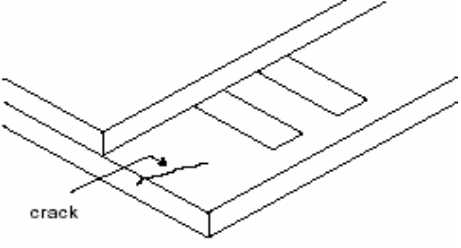

■ INSPECTION CRITERION

OUTGOING QUALITY STANDARD	PAGE 1 OF 7
TITLE:FUNCTIONAL TEST & INSPECTION CRITERIA	

This specification is made to be used as the standard acceptance/rejection criteria for Color mobile phone LCM with touch panel.

1 Sample plan

　　Sampling plan according to GB/T2828.1-2003/ISO 2859-1：1999 and ANSI/ASQC Z1.4-1993, normal level 2 and based on:

　　　　Major defect: AQL 0.65

　　　　Minor defect: AQL 1.5

2. Inspection condition

　　Viewing distance for cosmetic inspection is about 30cm with bare eyes, and under an environment of 20~40W light intensity, all directions for inspecting the sample should be within 45° against perpendicular line.

3. Definition of inspection zone in LCD.

　　Zone A: character/Digit area

　　Zone B: viewing area except Zone A (ZoneA+ZoneB=minimum Viewing area)

　　Zone C: Outside viewing area (invisible area after assembly in customer's product)

　　Fig.1 Inspection zones in an LCD.

　　Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble for
　　　　　quality and assembly of customer's product.

	OUTGOING QUALITY STANDARD	PAGE　2　OF　7
TITLE:FUNCTIONAL TEST & INSPECTION CRITERIA		

4. Inspection standards

4.1 Major Defect

Item No	Items to be inspected	Inspection Standard	Classification of defects
4.1.1	All functional defects	1) No display 2) Display abnormally 3) Missing vertical，horizontal segment 4) Short circuit 5) Back-light no lighting, flickering and abnormal lighting.	Major
4.1.2	Missing	Missing component	
4.1.3	Outline dimension	Overall outline dimension beyond the drawing is not allowed.	
4.1.4	linearity	No more than 1.5%	

4.2 Cosmetic Defect

Item No	Items to be inspected	Inspection Standard	Classification of defects
4.2.1	**Clear Spots** Black and white Spot defect Pinhole, Foreign Particle, polarizer Dirt	For dark/white spot, size Φ is defined as $\Phi = \dfrac{(x+y)}{2}$ 1.	Minor

For dark/white spot, size Φ is defined as $\Phi = \dfrac{(x+y)}{2}$

1.

Zone Size(mm)	Acceptable Qty		
	A	B	C
$\Phi \leqslant 0.1$	Ignore		Ignore
$0.10 < \Phi \leqslant 0.15$	2		
$0.15 < \Phi \leqslant 0.20$	1		
$0.20 < \Phi$	0		

2.

Clear Spots

TP Dirt — Minor

Zone Size(mm)	Acceptable Qty		
	A	B	C
$\Phi \leqslant 0.1$	Ignore		Ignore
$0.10 < \Phi \leqslant 0.15$	3		
$0.15 < \Phi \leqslant 0.25$	2		
$0.25 < \Phi$	0

4.4   Parts Defect

Item No	Items to be inspected	Inspection Standard	Classification of defects
	4.4.1 Parts contraposition	1、Not allow IC and FPC/heat-seal lead width is more than 50% beyond lead pattern. 2、Not allow chip or solder component is off center more than 50% of the pad outline.	Major
	4.4.2 SMT	According to the <Acceptability of electronic assemblies> IPC-A-610C class 2 standard. Component missing or function defect are Major defect, the others are Minor defect.	

| 4.4.3
TP Defect | 1、 Pattern font：

Pattern fonts are clear and symmetrical，pattern fonts filter lightly are allowed; The fort line is not allow to thinner or thicker than 1/3of normal size, and swing is not more than 0.1mm. the line is smooth and not broken.

图案字体　Pattern font

2、The wing forward in the side of Visual Area：

The length of wing forward inside of the Visual Area: $n \leq 0.2mm$；

Not excess 3 point，and the distance$D \geq 20mm$。

3、Film impression:With operation, must be invisibility.

4、Touch panel knob：if writing function normally,it could be allowed.

TP鼓　　TP knob

5、 Newton ring
Without operation, the color circle of Regularity or Non-regularity from the normal or slope angle of view.

1、**Regularity**： The area of the newton ring is less than 1/3 area of the touch panel; and no character affected and line distorted after touch panel lightening. It's ok.

2、 **Non-regularity** ： The area of the Newton ring is less than the 1/2 area of touch panel with lightening. And no character affected and line

规律形　　　　　非规律形 | Minor |

■ **PRECAUTIONS FOR USING LCD MODULES**

1   Handing Precautions

1.1   The display panel is made of glass and polarizer. As glass is fragile. It tends to become or chipped during handling especially on the edges. Please avoid dropping or jarring. Do not subject it to a mechanical shock by dropping it or impact.

1.2   If the display panel is damaged and the liquid crystal substance leaks out, be sure not to get any in your mouth. If the substance contacts your skin or clothes, wash it off using soap and water.

1.3   Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary. Do not touch the display with bare hands. This will stain the display area and degraded insulation between terminals (some cosmetics are determined to the polarizer).

1.4   The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully. Do not touch, push or rub the exposed polarizers with anything harder than an HB pencil lead (glass, tweezers, etc.). Do not put or attach anything on the display area to avoid leaving marks on it. Condensation on the surface and contact with terminals due to cold will damage, stain or dirty the polarizer. After products are tested at low temperature they must be warmed up in a container before coming in to   contact with room temperature air.

1.5   If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten cloth with one of the following solvents
                    - Isopropyl alcohol
                    - Ethyl alcohol
        Do not scrub hard to avoid damaging the display surface.

1.6   Solvents other than those above-mentioned may damage the polarizer. Especially, do not use the following.
                    - Water
                    - Ketone
                    - Aromatic solvents
        Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading. Avoid contact with oil and fats.

1.7   Exercise care to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or a current flow in a high-humidity environment.

1.8   Install the LCD Module by using the mounting holes. When mounting the LCD module make sure it is free of twisting, warping and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.

1.9   Do not attempt to disassemble or process the LCD module.

1.10 NC terminal should be open. Do not connect anything.

1.11 If the logic circuit power is off, do not apply the input signals.

1.12 Electro-Static Discharge Control，Since this module uses a CMOS LSI, the same careful attention should be paid to electrostatic discharge as for an ordinary CMOS IC. To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
                - Before removing LCM from its packing case or incorporating it into a set, be sure the module and your body have the same electric potential. Be sure to ground the body when handling the LCD modules.
                - Tools required for assembling, such as soldering irons, must be properly grounded. Make certain the AC power source for the soldering iron does not leak. When using an electric screwdriver to attach LCM, the screwdriver should be of ground potentiality to minimize as much as possible any transmission of electromagnetic waves produced sparks coming from the commutator of the motor.
                - To reduce the amount of static electricity generated, do not conduct assembling

and other work under dry conditions. To reduce the generation of static electricity be careful that the air in the work is not too dry. A relative humidity of 50%-60% is recommended. As far as possible make the electric potential of your work clothes and that of the work bench the ground potential.

    - The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

1.13 Since LCM has been assembled and adjusted with a high degree of precision, avoid applying excessive shocks to the module or making any alterations or modifications to it.

    - Do not alter, modify or change the shape of the tab on the metal frame.

    - Do not make extra holes on the printed circuit board, modify its shape or change the positions of components to be attached.

    - Do not damage or modify the pattern writing on the printed circuit board.

    - Absolutely do not modify the zebra rubber strip (conductive rubber) or heat seal connector.

    - Except for soldering the interface, do not make any alterations or modifications with a soldering iron.

    - Do not drop, bend or twist the LCM.

2   Handling precaution for LCM
    2.1   LCM is easy to be damaged. Please note below and be careful for handling.
   **2.2   Correct handling:**

As above picture, please handle with anti-static gloves around LCM edges.

    2.3   Incorrect handling:

Please don't touch IC directly.

Please don't stack LCM.

Please don't hold the surface of panel.

Please don't stretch interface of output, such as FPC cable.

Please don't hold the surface of IC.

Please don't operate with sharp stick such as pens.

3　Storage Precautions

3.1　When storing the LCD modules, the following precaution are necessary.

3.1.1 Store them in a sealed polyethylene bag. If properly sealed, there is no need for the desiccant.

3.1.2 Store them in a dark place. Do not expose to sunlight or fluorescent light, keep the temperature between 0°C and 35°C, and keep the relative humidity between 40%RH and 60%RH.

3.1.3 The polarizer surface should not come in contact with any other objects (We advise you to store them in the anti-static electricity container in which they were shipped).

3.2　Others

3.2.1 Liquid crystals solidify under low temperature (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subject to a low temperature.

3.2.2 If the LCD modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.

3.2.3 To minimize the performance degradation of the LCD modules resulting from destruction caused by static electricity etc., exercise care to avoid holding the following sections when handling the modules.

3.2.3.1 - Exposed area of the printed circuit board.

3.2.3.2 -Terminal electrode sections.

4　USING LCD MODULES

4.1　Installing LCD Modules

The hole in the printed circuit board is used to fix LCM as shown in the picture below. Attend to the following items when installing the LCM.

4.1.1 Cover the surface with a transparent protective plate to protect the polarizer and LC cell.
4.1.2 When assembling the LCM into other equipment, the spacer to the bit between the LCM and the fitting plate should have enough height to avoid causing stress to the module surface, refer to the individual specifications for measurements. The measurement tolerance should be ±0.1mm.

4.2　Precaution for assemble the module with BTB connector:

Please note the position of the male and female connector position, don't assemble or assemble like the method which the following picture shows
4.3　　Precaution for soldering the LCM

	Manual soldering	Machine drag soldering	Machine press soldering
No RoHS Product	290°C ~350°C. Time : 3-5S.	330°C ~350°C. Speed : 15-17 mm/s.	300°C ~330°C. Time : 3-6S. Press: 0.8~1.2Mpa
RoHS Product	340°C ~370°C. Time : 3-5S.	350°C ~370°C. Speed : 15-17 mm/s.	330°C ~360°C. Time : 3-6S. Press: 0.8~1.2Mpa

4.3.1 If soldering flux is used, be sure to remove any remaining flux after finishing to soldering operation (This does not apply in the case of a non-halogen type of flux). It is recommended that you protect the LCD surface with a cover during soldering to prevent any damage due to flux spatters.

4.3.2 When soldering the electroluminescent panel and PC board, the panel and board should not be detached more than three times. This maximum number is determined by the temperature and time conditions mentioned above, though there may be some variance depending on the temperature of the soldering iron.

4.3.3 When remove the electroluminescent panel from the PC board, be sure the solder has completely melted, the soldered pad on the PC board could be damaged.

4.4　　Precautions for Operation

4.4.1 Viewing angle varies with the change of liquid crystal driving voltage (VLCD). Adjust VLCD to show the best contrast.

4.4.2 It is an indispensable condition to drive LCD's within the specified voltage limit since the higher voltage then the limit cause the shorter LCD life.   An electrochemical reaction due to direct current causes LCD's undesirable deterioration, so that the use of direct current drive should be avoided.

4.4.3 Response time will be extremely delayed at lower temperature than the operating temperature range and on the other hand at higher temperature LCD's show dark color in them.   However those phenomena do not mean malfunction or out of order with LCD's, which will come back in the specified operating temperature.

4.4.4 If the display area is pushed hard during operation, the display will become abnormal. However, it will return to normal if it is turned off and then back on.

4.4.5 A slight dew depositing on terminals is a cause for electro-chemical reaction resulting in terminal open circuit. Usage under the maximum operating temperature, 50%RH or less is required.

4.4.6 Input logic voltage before apply analog high voltage such as LCD driving voltage when power on.   Remove analog high voltage before logic voltage when power off the module. Input each signal after the positive/negative voltage becomes stable.

4.4.7 Please keep the temperature within the specified range for use and storage. Polarization degradation, bubble generation or polarizer peel-off may occur with high temperature and high humidity.

4.5　　Safety

4.5.1 It is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.

4.5.2 If any liquid leaks out of a damaged glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

4. 6   Limited Warranty

      Unless agreed between Multi-Inno and the customer, Multi-Inno will replace or repair any of its LCD modules which are found to be functionally defective when inspected in accordance with Multi-Inno LCD acceptance standards (copies available upon request) for a period of one year from date of production. Cosmetic/visual defects must be returned to Multi-Inno within 90 days of shipment. Confirmation of such date shall be based on data code on product. The warranty liability of Multi-Inno limited to repair and/or replace on the terms set forth above. Multi-Inno will not be responsible for any subsequent or consequential events.

4.7   Return LCM under warranty

    4.7.1 No warranty can be granted if the precautions stated above have been disregarded. The typical examples of violations are :

    4.7.1.1 - Broken LCD glass.

    4.7.1.2 - PCB eyelet is damaged or modified.

    4.7.1.3 -PCB conductors damaged.

    4.7.1.4 - Circuit modified in any way, including addition of components.

    4.7.1.5 - PCB tampered with by grinding, engraving or painting varnish.

    4.7.1.6 - Soldering to or modifying the bezel in any manner.

    4.7.2 Module repairs will be invoiced to the customer upon mutual agreement. Modules must be returned with sufficient description of the failures or defects. Any connectors or cable installed by the customer must be removed completely without damaging the PCB eyelet, conductors and terminals.

■ PACKING SPECIFICATION

Please consult our technical department for detail information.

■ PRIOR CONSULT MATTER

1   For Multi-Inno standard products, we keep the right to change material, process ... for improving the product property without prior notice to our customer.

2   For OEM products, if any changes are needed which may affect the product property, we will consult with our customer in advance.

3   If you have special requirement about reliability condition, please let us know before you start the test on our samples.
