

**Features**

- Internal LCD drivers
 - 16 common signal drivers
 - 80 segment signal drivers
- Maximum display dimensions
 - 16 characters * 2 lines or
 - 32 characters * 1 line
- Interfaces with 4-bit or 8-bit MPU
- Versatile display functions provided on chip:
 - Display Clear, Cursor Home, Display ON/OFF, Cursor ON/OFF, Character Blinking, Cursor Shift, and Display Shift
- Three duty factors, selected by PROGRAM:
 - 1/8, 1/11, and 1/16
- Displays Data RAM (DD RAM): 80 X 8 bits (Displays up to 80 characters)
- Character Generator RAM (CG RAM):
 - 64 X 8 bits for general data,
 - 8 5 X 8 programmable dot patterns, or
 - 4 5 X 10 programmable dot patterns
- Low voltage reset
- ITO option for A-type and B-type LCD waveform
- Character Generator ROM (CG ROM):
 - 2 kinds of CG ROM sizes:
 - 192 characters:
 - 160 5 X 8 dot patterns
 - 32 5 X 10 dot patterns
 - 240 characters:
 - 192 5 X 8 dot patterns
 - 48 5 X 10 dot patterns
 - Custom CG ROM is also available
- Built-in power-on reset function
- Logic power supply: single +5V supply
- LCD driver power supply: V1~V5 ($V_{DD}+0.3 - V_{DD}-7.0$), divided by Built-in LCD power division resistor.
- Two oscillator operations (Freq. = 500KHz - 540KHz):
 - Built-in RC oscillation
 - External clock
- CMOS Process
- Available in COG FORM

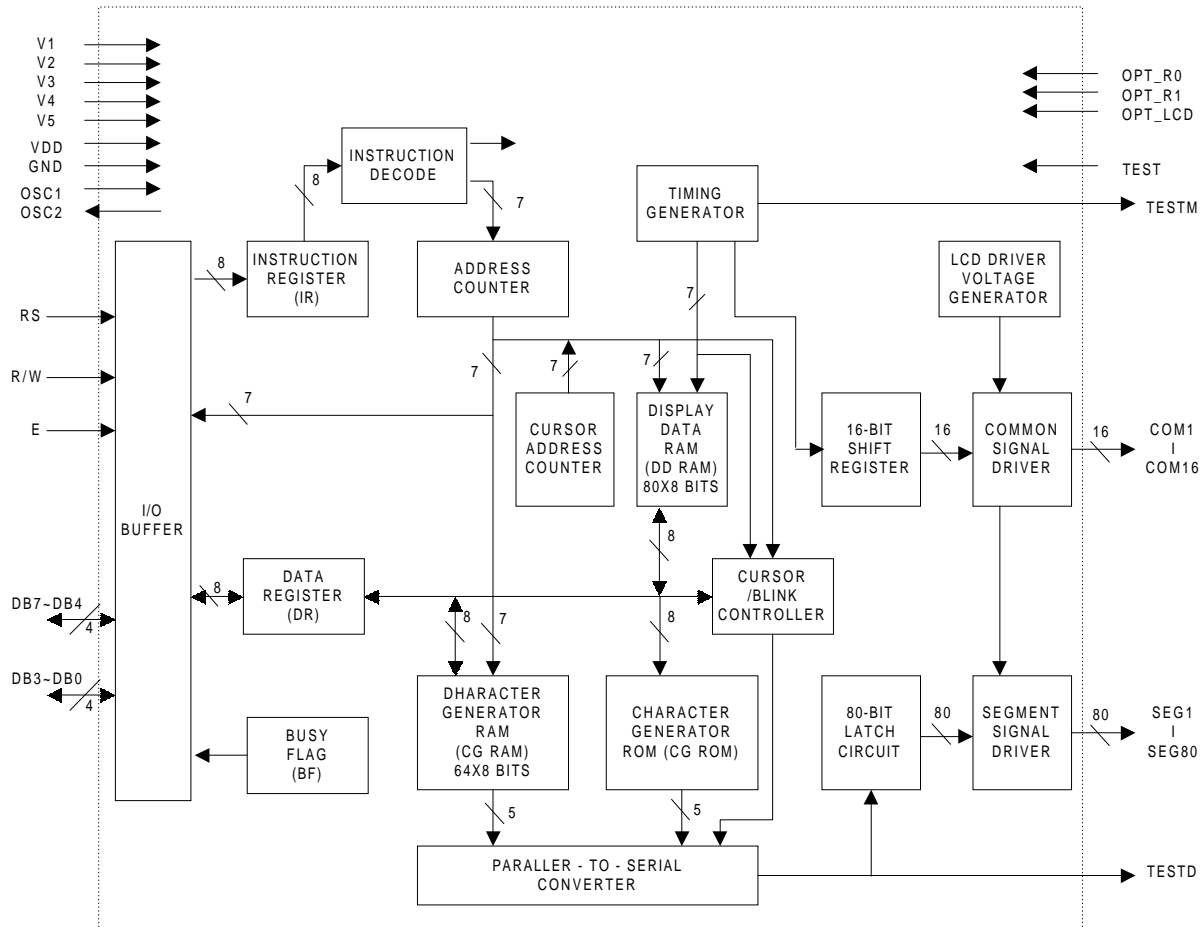

General Description

The NT7603 is a dot matrix LCD controller and driver LSI that can operate with either a 4-bit or an 8-bit microprocessor (MPU). NT7603 receives control character codes from the MPU, stores them in an internal RAM (up to 80 characters), transforms each character code into a 5 X 7, 5 X 8, or 5 X 10 dot matrix character pattern, and then displays the codes on the LCD panel. The built-in Character Generator ROM consists of 256 different character patterns.

The NT7603 also contains Character Generator RAM where the user can store 8 different character patterns at run time. These memory features make character display flexible. NT7603 also provides many display instructions to achieve versatile LCD display functions. The NT7603 is fabricated on a single LSI chip using the CMOS process, resulting in very low power requirements.

Pad Configuration

Item	Pad No.	Size		Unit

Block Diagram

Pad Description (Total 166 pads for COG type.)

Pad No.	Designation	I/O	External Connection	Description
1 – 15	GND	P	Power supply	GND: 0V
16	OSC1	I		For external clock operation, clock inputs to OSC1.
17	OSC2	O		Clock output.
18	V1	P	Power supply	Power supply for LCD driver. VDD ≥V1 ≥V2 ≥V3 ≥V4 ≥V5 ≥GND
19	V2	P	Power supply	Power supply for LCD driver
20	V3	P	Power supply	Power supply for LCD driver
21	V4	P	Power supply	Power supply for LCD driver
22 – 25	V5	P	Power supply	Power supply for LCD driver
26, 28	OPT_R0, OPT_R1	I	ITO Option	The built-in bias resistor select: OPT_R1, OPT_R0: No ITO=1. ITO on=0 1,1: 2.2KΩ; 1,0: 4KΩ; 0,1: 6.8KΩ; 0,0:No built-in bias resistor:
29 – 43	VDD	P	Power supply	VDD: +5V
44, 45	RS	I	MPU	Register select signal 0: Instruction register (write), Busy flag, address counter (read) 1: Data register (write, read)
46, 47	R/W	I	MPU	Read/Write control signal 0: Write 1: Read
48, 49	E	I	MPU	Read/Write start signal
50, 51	DB0	I/O	MPU	Lower 4 tri-state bi-directional data bus for transmitting data between MPU and NT7603. Not used during 4-bit operation.
52, 53	DB1			
54, 55	DB2			
56, 57	DB3			
58, 59	DB4	I/O	MPU	Higher 4 tri-state bi-directional data bus for transmitting data between MPU and NT7603. DB7 is also used as busy flag.
60, 61	DB5			
62, 63	DB6			
64, 65	DB7			
66	OPT_LCD	I	ITO Option	No ITO. (Option =1): B-Type waveform ITO On. (Option =0): A-Type waveform
68	TESTD	O	Test output	Test data output. (No connect for user)
164 – 157	COM1 – 8	O	LCD panel	Common signal output pins, for place on the upper glass (IC face up).
69 – 76,	COM9 – 16	O	LCD panel	
156 – 77	SEG1 – 80	O	LCD panel	Segment signal output pins
165	TEST	I	Test pin	Test pin internally pull-down. (No connect for user)
166	TESTM	O	Test output	LCD driver clock output. (No connect for user)
67, 27	GND_OUT	P		GND output pin, use for pull-down ITO option.

Functional Description

The NT7603 is dot-matrix LCD controller and driver LSI. It operates with either a 4-bit or an 8-bit microprocessor (MPU). The NT7603 receives both instructions and data from the MPU. Some instructions set operation modes, such as the function mode, data entry mode, and display mode; as well as some control LCD display functions, such as clear display, restore display, shift display, and cursor. Other instructions include read and write both data and addresses. All instructions allow users convenient and powerful functions to control the LCD dot-matrix displays.

Data is written into and read from the Data Display RAM (DD RAM) or the Character Generator RAM (CG RAM). As display character codes, the data stored in the DD RAM decodes a set of dot-matrix character patterns that are built into the Character Generator ROM (CG ROM). The CG ROM, with many character patterns (up to 256 patterns), defines the character pattern fonts. The NT7603 regularly scans the character patterns through the segment drivers. The CG RAM stores character pattern fonts at run time if users intend to show character patterns that are not defined in the CG ROM. This feature makes character display flexible. Other unused bytes can be used as general-purpose data storage.

The LCD driver circuit consists of 16 common signal drivers and 80 segment signal drivers allowing a variety of application configurations to be implemented.

Character Generator ROM (CG ROM)

The character generator ROM generates LCD dot character patterns from the 8-bit character pattern codes. The NT7603 provides 2 CG ROM configurations:

1. 192 Characters:

The CG ROM contains 160 5 X 8 dot character patterns and 32 5 X 10 dot character patterns, which the relation between the character codes and character patterns is shown in Table 1. The character codes from 00H to 0FH are used to get character patterns from the CG RAM. Character codes from 10H to 1FH and from 80H to 9FH map to full character patterns. Character codes from E0H to FFH are assigned to generate 5 X 10 dot character patterns, and other codes are used to generate 5x8 dot character patterns.

2. 240 Characters:

The CG ROM contains 192 5 X 8 dot character patterns and 48 5 X 10 dot character patterns, which the relation between the character codes and character patterns is shown in Table 2. The character codes from 00H to 0FH are used to get character patterns from the CG RAM. Character codes from 10H to 1FH and from E0H to FFH are assigned to generate 5 X 10 dot character patterns, and other codes to generate 5 X 8 dot character patterns. No null character pattern exists in this type. Note that the underlined cursor, displayed on the 8th duty may be obscure if the 8th row of a dot character pattern is coded. We recommend that users display the cursor in the blinking mode if they code 5x8 dot character patterns is their custom CG ROM.

Custom character patterns are available by mask-programming ROM. For convenience of character pattern development, NOVATEK has developed a user-friendly editor program for the NT7603 to help determine the character patterns users prefer. By executing the program on the computer, users can easily create and modify their character patterns. By transferring the resulting files generated by the program through a modem or some other communication method, the user and NOVATEK have established a reliable, fast link for programming the CG ROM.

Absolute Maximum Ratings*

Power Supply Voltage (V_{DD}) -0.3V to +7.0V
 Power Supply Voltage (V_1 to V_5)
 GND to $V_{DD}+0.3V$
 Input Voltage (V_i) -0.3V to $V_{DD} +0.3V$
 Operating Temperature (T_{OPR}) -20°C to +70°C
 Storage Temperature (T_{STG}) -55°C to +125°C

***Comments**

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to this device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied or intended. Exposure to the absolute maximum rating conditions for extended periods may affect device reliability.

- All voltage values are referenced to GND = 0V
- V_1 to V_5 , must maintain $V_{DD} \geq V_1 \geq V_2 \geq V_3 \geq V_4 \geq V_5 \geq GND$.

Interface to LCD
(1) Character Font and Number of Lines

The NT7603 provide a 5 X 7 dot character font 1-line mode, a 5 X 10 dot character font 1-line mode and a 5 X 7 dot character font 2-line mode, as shown in the table below.

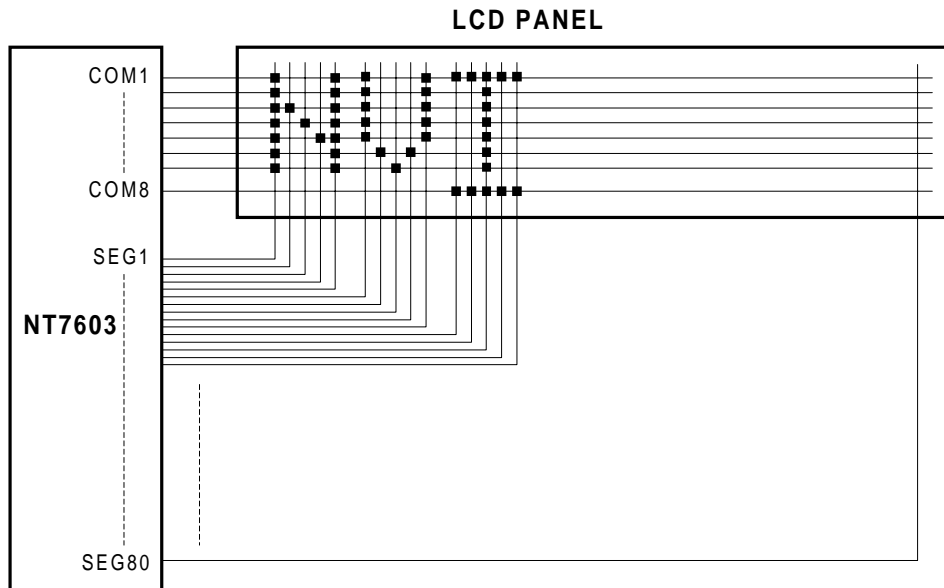

Three types of common signals are available as displayed in the table. The number of lines and the font type can be selected by the program.

Number of Lines	Character Font	Number of Common Signals	Duty Factor	Bias
1	5 X 7 dots + Cursor (or 5x8 dots)	8	1/8	1/4
1	5 X 10 dots + Cursor	11	1/11	1/4
2	5 X 7 dots + Cursor (or 5x8 dots)	16	1/16	1/5

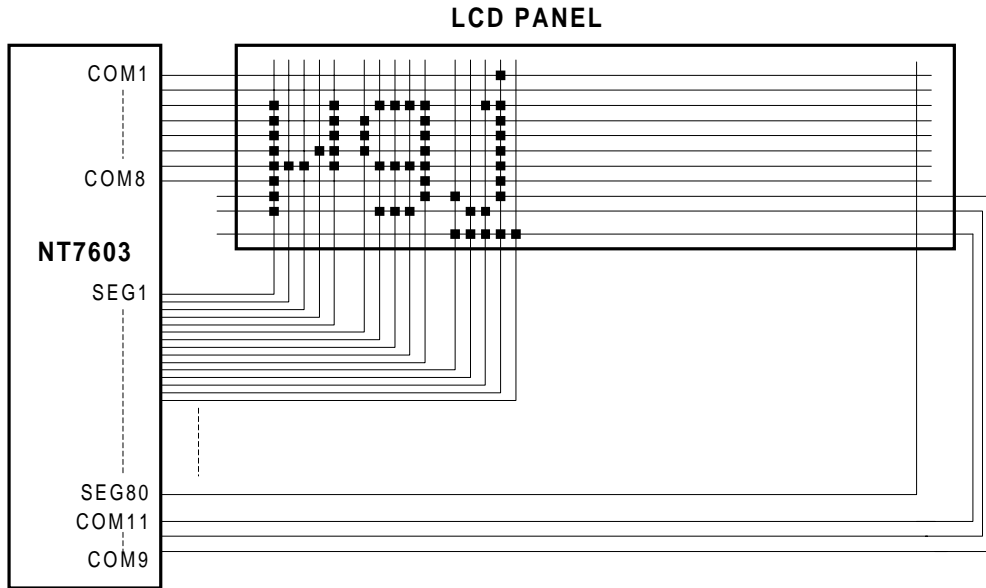

(2) Connection to LCD

The following 4 LCD connection examples show the various combinations between characters and lines. NT7603 can directly drive the following combinations:

- (a) 5 X 8 Font - 16 character X 1 line (1/8 duty cycle, 1/4 bias)

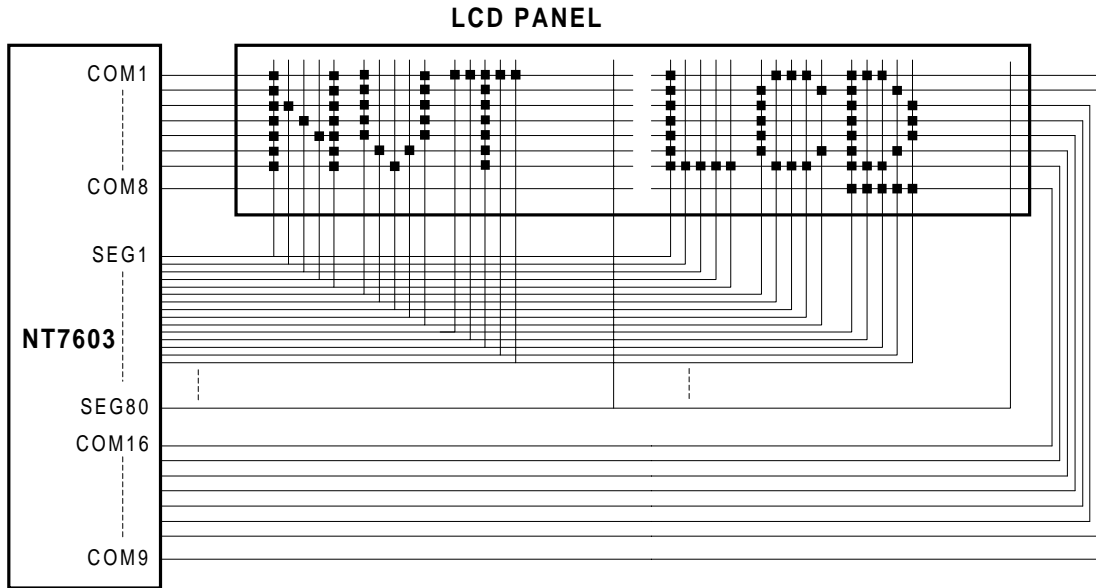

(b) 5 X 10 Font - 16 character X 1 line (1/11 duty cycle, 1/4 bias)

(c) 5 X 8 Font - 16 character X 2 line (1/16 duty cycle, 1/5 bias)

(d) 5 X 8 Font - 32 character X 1 line (1/16 duty cycle, 1/5bias)

(3)Orientation type of NT7603:

(3) Bias Power Connection

NT7603 provides 1/4 or 1/5 bias for various duty cycle applications. The built-in power division resistor divide voltage is described in the following table. The division resistor is The connection of NT7603, power supply, and resistors are also shown as follows:

Power Division	1/8, 1/11 Duty Cycle - 1/4 Bias	1/16 Duty Cycle - 1/5 Bias
V ₁	$V_{DD} - 1/4 V_{LCD}$	$V_{DD} - 1/5 V_{LCD}$
V ₂	$V_{DD} - 1/2 V_{LCD}$	$V_{DD} - 2/5 V_{LCD}$
V ₃	$V_{DD} - 1/2 V_{LCD}$	$V_{DD} - 3/5 V_{LCD}$
V ₄	$V_{DD} - 3/4 V_{LCD}$	$V_{DD} - 4/5 V_{LCD}$
V ₅	$V_{DD} - V_{LCD}$	$V_{DD} - V_{LCD}$

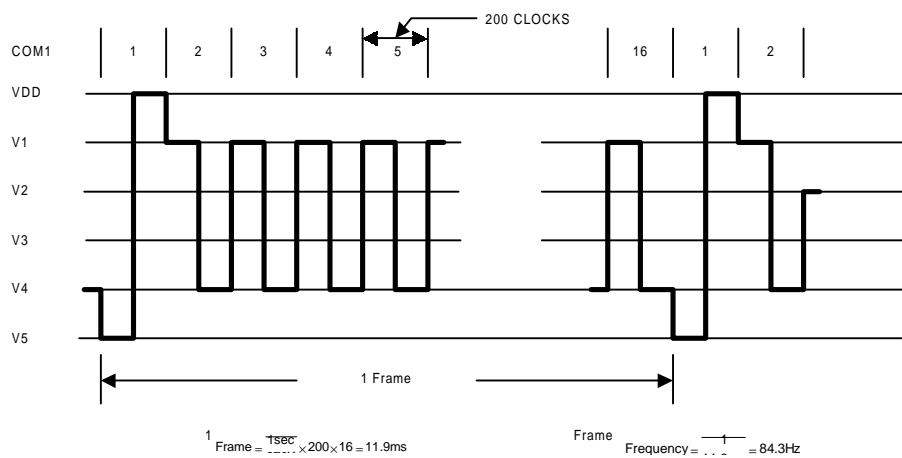

The bias is auto selected by duty cycle. When LCD is set to 1/16 duty, the bias is set to 1/5. Otherwise, the bias is set to 1/4.

The ITO Option can select the division resistor value:

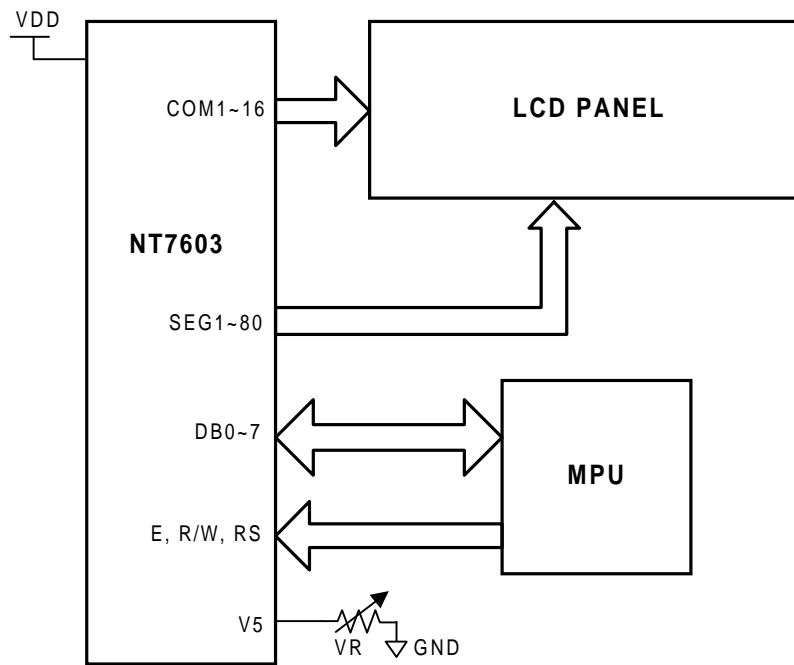

OPT_R1	OPT_R0	Division Resistor
No ITO (1)	No ITO (1)	2.2KΩ
No ITO (1)	ITO On (0)	4KΩ
ITO On (0)	No ITO (1)	6.8KΩ
ITO On (0)	No ITO (0)	No built-in resistor (external input)

Exit Power division. (The resistance value depends on the LCD panel size.)

(4) LCD Waveform
A-type, 1/8 Duty Cycle, 1/4 Bias

A-type, 1/11 Duty Cycle, 1/4 Bias

A-type, 1/16 Duty Cycle, 1/5 Bias

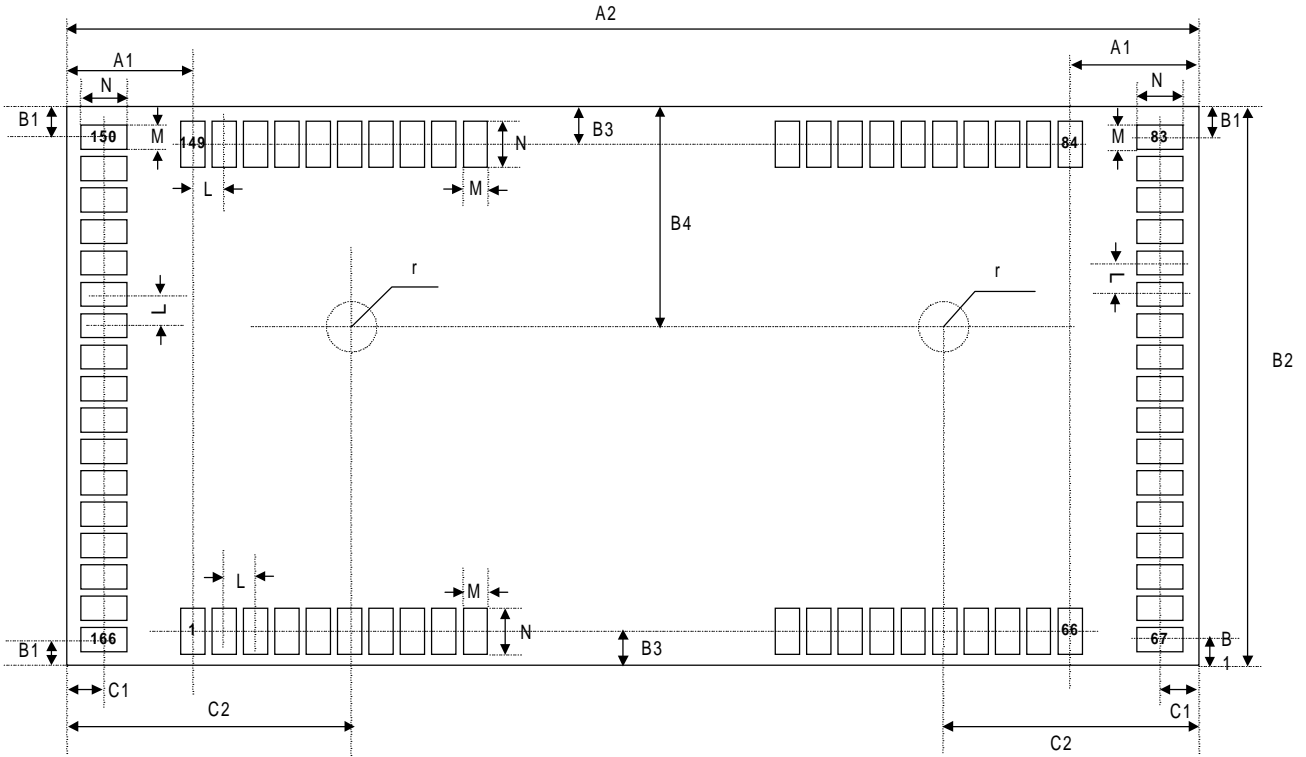

B-type, 1/8 Duty Cycle, 1/4 Bias

B-type, 1/11 Duty Cycle, 1/4 Bias

B-type, 1/16 Duty Cycle, 1/5 Bias
